

ARMADALE BOWLS CLUB ENVIRONMENTAL SUSTAINABILITY STRATEGY

At Armadale Bowls Club we play bowls in an attractive parkland setting.

We value our environment and are concerned about the climatic changes Australia is currently experiencing with the resulting rising temperatures which will contribute to rising sea levels, longer fire seasons and worse droughts.

Therefore, it is important for each person to do their part to ensure the longevity and sustainability of sport and our planet.

Our Club must act now and make a commitment to implement the following strategies in order to reduce any adverse impact on our environment.

We will minimise:-

- The use of electricity in all our activities
- The use of water
- The creation of waste

We will:-

- Endeavour to take a sustainable approach to running events
- Take the environmental credentials of our suppliers into account when processing new products and services
- Publicise and promote local environmental commitments to all
- Review our commitments to environmental sustainability annually or when relevant legislation changes are introduced
